CAREER OBJECTIVE

Fresher BE Electronics & Communication Engineering student with strong hands-on foundation in basic electronics, embedded systems, PCB design, and analog/digital circuits. Eager to contribute practical hardware skills and take ownership of real-world electronics challenges, and grow as part of a core EC team.

EDUCATION

BE – Electronics & Communication Engineering

Canara Engineering College, Bantwal, Karnataka (Visvesvaraya Technological University)

Aug 2023 – Aug 2027 (Expected)

CGPA: 8.0 / 10.0

CORE ELECTRONICS SKILLS

- Circuit Design & Analysis: Analog & digital electronics, PCB design, CMOS logic, component-level troubleshooting (resistors, capacitors, transistors, op-amps, diodes)
- Simulation & EDA Tools: LTspice, Multisim, MATLAB, Scilab, Solid Edge
- Embedded Platforms: Arduino, ESP32, ESP32-CAM
- VLSI & Digital Design: Verilog, CMOS design principles, Layout design, IC integration flow (using LT spice)
- Programming: C, C++ for firmware & MCU-level development

INTERNSHIP EXPERIENCE

Intern – AI & Embedded Systems

Apr 2025 – Dec 2025

iTelematics Software Private Limited, Mangaluru, Karnataka

- Interfaced a Battery Management System (BMS) with an MCU to capture real-time Temperature, Voltage, and Current from hardware sensors — core analog/digital electronics hardware work
- Integrated thermal and voltage sensors to monitor internal temperature and battery State of Charge (SoC) within an automotive-grade control circuit
- Engineered a robust multi-sensor data pipeline transmitting BMS data to a centralised database for safety analysis; built two-phase AI-powered EV battery fire prevention system for real-time thermal runaway detection

Intern – VLSI Domain

May 2025 – Jun 2025

InternPE (Online)

- Designed digital logic circuits using CMOS design principles; performed IC integration and used LTspice for circuit simulation and analysis; completed end-to-end IC design flow tasks

KEY PROJECTS

Advanced Power Supply with Inverter — 1st Prize, Hardware Project Expo 2025

- Designed a compact power supply integrating buck and boost converters for adjustable DC output (1.5 V – 30 V), backed by a 12 V battery — demonstrates strong power electronics and circuit design skills
- Incorporated mobile charging protection circuitry and a 50 W inverter for powering small AC appliances during outages

Solar-Powered IoT Retractable Roof — 1st Prize, Akshay Urja Diwas 2025

- Designed an automated smart roof using ESP32, rain sensors, servo motors, and solar battery storage for renewable energy-powered control

Edge-Based Object Recognition System (TinyML & ESP32-CAM)

- Built a fully offline AI object recognition system on ESP32-CAM; integrated OV2640 camera and I2C OLED display for real-time local detection and on-device visualisation

8-Bit ALU Processor (Verilog)

- Built an 8-bit ALU processor using Verilog; implemented arithmetic and logical operations with status flags such as carry, zero, and overflow for real-time computation and waveform-based verification..

CERTIFICATIONS

- VLSI for Beginners (NIELIT Calicut) | IoT & Electronics (Infosys Springboard) | Smart IoT Innovation (Kakunje Software) | C Programming (IIT Bombay, Spoken Tutorial) | Introduction to C++ (Learntube) | Antenna Fabrication & Satellite Tracking Workshop (NMAMIT)
